

The Aluminium Made-to-Measure Range for Furniture

Connecting profiles for rolled edge worktops

Aluminium connecting profiles create a smooth link between cut edge and rolled edge worktop joined at an angle. Mitred or shaped cuts are unnecessary; the profiles are rounded on both sides and can therefore be used on the left or right, with four drill holes and two punched holes provided for the turnbuckles.

Benefits:

- Clean finishes for corners
- No need for mitre cuts
- Can be used on left or right

Surface finish:
E6/EV1, silver anodised
