RESOFLOOR® Top quality flooring by Resopal

RESOFLOOR® combines the beauty of high gloss with the extremely high level of resistance required for floors subject to maximum wear stresses and in this way perfects the high gloss design concept in high quality interior finishings.

Worldwide unique, patented technology

As early as the 1990s corundum – second in hardness only to diamonds – has been worked into overlays, thus creating wear resistant surfaces. However, in order to manufacture extremely wear resistant high gloss surfaces, it is necessary to increase the corundum content and to locate the particles directly at the surface. But this failed so far due to the limited hardness of standard press plates. The worldwide unique technology for titanium coated press plates, developed and patented by WILSONART®, allows us to manufacture the maximum wear resistant high gloss surface of RESOFLOOR® (abrasion resistance AC 5) – Titanium High Wear.

The large format RESOFLOOR® floor elements (1488 mm x 293 mm x 11,4 mm) are equipped with a heavy high resilient click system. You can finish off RESOFLOOR® with high-gloss skirting boards – with the same decor, color matched or accentuated – with elegant 3 mm edge radius.

The fixing of ORIGINAL RESOPAL® skirting boards can be cleverly concealed by our Smart Source® clip set. Technical information on page 204.

- **Class of use 33**
- **Abrasion resistance AC 5**
- **Impact resistance IC 3**
