

The revolution in waterproof room design

RESOPAL SPASTYLING®

RESOPAL SPASTYLING®

The revolution in waterproof room design

RESOPAL SpaStyling® opens the door to a completely new approach to designing wet areas. In terms of design, functionality and application, our waterproof, ultra light wall and floor elements provide a wide repertoire for creating a unique feel-good atmosphere in bathrooms, wellness areas, health centers and all rooms in which water is the dominant element.

RESOPAL SpaStyling® can be processed just as easily as a conventional wood-based material (cutting, sawing, drilling). As it is fast, clean and easy to install as well as being light to handle and process, SpaStyling® is a paragon of a new generation of materi-

als for wet area applications. The ORIGINAL RESOPAL® surface makes SpaStyling® resistant to scratching, scouring and abrasion, shock-proof and impact-proof, non-staining, extremely lightfast, with closed pores and therefore absolutely hygienic and easy to care for.

RESOPAL SpaStyling® consists of a RESOPAL® top layer and a RESOPAL® backing. Both are bonded to the waterproof and ultra light glass fibre reinforced composite core. SpaStyling® is well below the strictest emission criteria worldwide.

RESOPAL SPASTYLING® BOARD

The large SpaStyling® Board (3050 mm x 1320 mm) is perfectly suited to give large walls designer finishes. The RESOPAL SpaStyling® Board can be directly bonded to the wall substrate in new and refurbished buildings (for more detailed information, please order processing instructions).

RESOPAL SPASTYLING® TITANIUM FLOOR

When used on floors, the SpaStyling® Titanium Floor elements are simply clicked into place (floating laying).

RESOPAL SPASTYLING® SHOWER ELEMENTS

The shower elements that fit flush with the floor can be produced with matching decor and finishes and are suitable for the use in barrier-free baths. They are made from RESOPAL SpaStyling® in Titanium Floor-quality and a waterproof hard foam board. Circumferential sealing strips (butyl rubber) ensure a water-tight seal between the wall and floor.

The shower elements are made from a single piece, i.e. without any joints. Potential contamination is therefore virtually eliminated. The integrated gradient ensures fast run-off of shower water. The Shower Elements are available in various common sizes, with central or decentral drainage. All decors are also available in the extremely non-slip surface GF (Guardian Finish) with the slip resistance R 10-B.

You inspire... we materialize®

Quadrant Plastic Composites World Leader in Thermoplastic Composites

Are you looking for the right material solution? A long life product, which,

- provides weight reduction
- is humidity and water resistant
- has excellent acoustic properties
- guarantees high impact resistance

Quadrant Plastic Composite's SymalITE® lightweight reinforced thermoplastic (LWRT) is ideal for panelized applications in the category groups Building and Construction, Automotive and Recreation Vehicles, Transport and Interior Design.
